

# AG-TECH ISRAEL

## EXHIBITION GUIDE 2020

*Welcome to the Ag-Tech Israel Virtual Exhibition!*

This guide includes a list of all sponsors, partners, and exhibitors, including relevant contact information, company information, and more.

You can view and download exhibitor brochures and presentations in the virtual exhibition by visiting each company booth, or by contacting the company directly.

We hope you enjoy this unique experience and find it useful!

*Best wishes,*

*Eran, Michal, and Ian*

*The Ag-Tech Israel Exhibition Team*

# Exhibition Sponsors

## Amazon Web Services

Amazon Web Services (AWS) is the world's most comprehensive and broadly adopted cloud platform, offering over 175 fully featured services from data centers globally. Millions of customers—including the fastest-growing startups, largest enterprises, and leading government agencies—are using AWS to lower costs, become more agile, and innovate faster.

נשיץ ברנדס אמיר  
NASCHITZ BRANDES AMIR

## Naschitz, Brandes, Amir & Co.

Naschitz Brandes Amir (NBA) is one of Israel's largest and most prestigious full-service law firms, with an international and domestic practice that embraces virtually the entire spectrum of civil matters. The firm represents some of the world's largest companies and financial institutions in corporate, commercial and litigation matters, in Israel and abroad, including cross-border and domestic mergers and acquisitions, hi-tech, capital markets, banking, finance, commercial, insurance and tort litigation, real estate, antitrust, taxation and other regulatory matters.

Agrorim, an Israeli Agrotech startup company, has developed a patented platform technology of molecular encapsulation of generic natural active compounds such as pheromones or essential oils for plant protection, as an alternative for synthetic chemicals

Arugga's autonomous ground robot will treat and monitor every plant in the greenhouse. using AI-based vision and proprietary mechanical system to replicates buzz pollination.

Automato Robotics is helping to solve the international labor crisis in agriculture by providing affordable robots to every farmer. Focused on passive greenhouses, we developed a robot which can be fitted for many purposes. Our first add-on is a tomato harvester, soon to be followed by an autonomous sprayer add-on.

Autonomous Pivot

Autonomous Pivot turns center-pivots irrigation systems into robotic platforms for self-directed irrigation, fertigation, and crop protection, enabling growers to maximize yield and reduce costs. Our platform allows farmers to limit nitrogen, water and reduce other input costs by 27%.

BeeFree Agro is developing a drone-based autonomous herding system designed to help ranchers save time and money, reduce animal stress and carbon footprint, while increasing yields and productivity.

BeeHero maximizes crop yields through precision pollination, combining sophisticated machine learning algorithms with low-cost sensors to stimulate maximum output potential during your peak pollination cycles.

## BEEWISE

BeeWise offers autonomous beehives that operate with no human intervention by utilizing AI-powered precision robotics. The company's solution automates all beekeeping activities in order to reduce colony loss, increase yield, and eliminate the use of chemical pesticides.

## CLARIFRUIT

Clairfruit empower growers, marketing companies, wholesalers, and retailers with the fresh fruit and vegetable quality control data needed to make the right business decisions to reduce waste and maximize profitability across the supply chain.

Cody is an Israeli startup company using the most sophisticated tools in order to increase the breeding efficacy of livestock. Biasing the sex of the offspring contribute to the sustainability of breeding and increase animal welfare.

CropX is an AgAnalytics company that revolutionizes the farm and the decision-making process, by integrating above-ground data sets with real-time soil data measured by proprietary sensors that transmit the data to a cloud-based platform, to provide insights & automations.

GiliOcean Technology

GiliOcean Technology specializing in innovative sustainable fish farming. The company has designed and operated the world's largest offshore single array fish farm in Open Ocean Production.

GO Smart supplies the farmer with the necessary technologies to analyze water quality as well as fish biomass, mortality, and behavior. Thus, providing essential information needed for precise data-based decision making, enabling better management tools, livestock monitoring, and precision aquaculture.

Greeneye is a leading technology company with a focus in precision agriculture, established in 2017 and based in Tel-Aviv, Israel.

Groundwork BioAg produces highly-effective mycorrhizal inoculants for commercial agriculture. Containing concentrated and vigorous beneficial fungi, Rootella® and DYNAMYCO™ inoculants significantly improve soil nutrient uptake in plants.

miRobot is an innovative add-on robotic solution that automates the complete milking procedure (pre and post), integrating with the existing milking system to

NRGene is a leading genomics AI company that provides software solutions to accelerate breeding and basic research of crop plants and farm animals.

Plant-Ditech is an Israel-based company that has developed the groundbreaking Plantarray system - a whole-plant functional (physiological) phenotyping, simulation, and diagnostic research platform suitable for greenhouse and indoor facilities.

Saturas develops a unique miniature sensor that is embedded in the tree trunk, in direct contact with the water tissue, and constantly measures the plant's water status, enabling farmers to optimize irrigation and save water, increase yield quality and quantity.

Seedwiz is a world-leading GIS/ AI platform, which enables the farmers to select the optimal plant variety seeds and supports direct trading of seeds between the farmers and the seed companies.

Spray your farm at the push of a button. SkyX delivers a complete, ready to go, spraying solution based on our proprietary agriculture-drone technology.

Tal-Ya creates an ideal microclimate at the root zone of young trees and vegetable crops, the heart of the plant. leveraging the laws of science—provides an answer to growers' needs in a simple, hassle-free, affordable, profitable, and sustainable way.

Viridix empowers farmers by taking uncertainty out of irrigation decisions. By combining accurate and timely water potential data with additional information such as weather, irrigation protocols and soil characteristics, Viridix is simplifies and automates one of the most important activities in farming.
